	Claims		NO
Inventive step (IS)	Claims	1-6	YES
	Claims		NO
Industrial applicability (IA)	Claims	1-6	YES

Prior art

D1: EP-A-0 158 229

D2: EP-A-1 004 610

D3: EP-A-0 126 471.

Amendments

Amended claims 1-6 are allowed.

Novelty

Claims 1-6 are novel.

None of documents D1 to D3 describes a method wherein a neopentyl glycol is used, which contains less than 5 ppm organically bound nitrogen. For production-related reasons, the commercial neopentyl glycols described in documents D1 to D2 routinely contain more than 15 ppm organically bound nitrogen. Documents D1 to D2 offer nothing to suggest that specially produced/purified neopentyl glycols are used. Therefore, claims 1-6 are novel.

Box No. V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability;
citations and explanations supporting such statement**Inventive step**

Claims 1-6 involve an inventive step.

The present examples show that the use of neopentyl glycols containing less than 5 ppm organically bound nitrogen strongly increases the catalytic activity of the heteropolyacid (lower deactivation). This effect is surprising and cannot be derived from the prior art in an obvious manner. Consequently, claims 1-6 involve an inventive step.

Industrial applicability

The subject matter of the claims is industrially applicable.
